US-09-072-994-14 1791 1 MKLSDYYIDKELIYNSAISD.....IRYDRSKRITSKEILQLMLD 339 score: Title: Perfect sc Sequence:

**BLOSUM62** Scoring table: 188963 segs, 23686106 residues Searched:

A\_Geneseq\_36:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Example 12; Pages 208-209; 326pp; English.

The present sequence represents a human CDK2-green fluorescent protein C (GFP) fusion protein. The fusion protein is used in an assay to exemplify the invention. The specification describes how quantitative information about the influence of a molecule on a cellular response is obtained by recording the variation, caused by the molecule, on mechanically intact living cells, in the spatially distributed light emission is processed to provide information that correlates spatial cemission to the degree of the molecule. The method is used to identify agents that (in)directly affect intracellular signalling, cespecially to screen for potential therapeutic agents or toxins, and to sequence 544 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (GFP)-human

Determining effect on signalling pathways in live cells from redistribution of luminophores - specifically fusions of green fluorescent protein with a signalling component, and new apparatus, particularly for identifying toxins and potential therapeutic agent Example 12; Pages 212-213; 326pp; English.

The present sequence represents a green fluorescent protein (GFP)-1 CDK2 fusion protein. The fusion protein is used in an assay to exemplify the invention. The specification describes how quantitatin information about the influence of a molecule on a cellular responsinformation about the influence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GIYKAPELILGITNYEYEIDIWSLGIILTGLYSENFQSVLVKDDKELTNDSHVSDLYLLN

The dusqued or monitoring P. carinii

The sequence is that of a Cdc2 polypeptide.

The Cdc2 polypeptides are useful in treating P. carinii

The Sequence is that of a Cdc2 polypeptide.

The Cdc2 polypeptides are useful in treating P. carinii

C pneumonia in patients with chronic immunosuppression. Conditions

associated with P. carinii include acquired immune deficiency syndrome (AIDS), solid tumors, hematological malignancies, organ transplantation

and inflammatory conditions. The polypeptides are additionally useful

C AIDS), solid tumors, hematological malignancies, organ transplantation

and inflammatory conditions. The polypeptide and its antibodies are

and inflammatory conditions. The polypeptide and its antibodies are

c useful for diagnosing or monitoring P. carinii infection in patients.

The P. carinii Cdc2 polypeptides allow a therapeutic approach to treating

P. carinii pneumonia because they are not limited by significant side

effects. Polynucleotides encoding P. carinii Cdc2 enable in vitro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           510
obtained by recording the variation, caused by the molecule, on mechanically intact living cells, in the spatially distributed light emitted from a luminophore present in the cells. The variation in light emission is processed to provide information that correlates spatial distribution to the degree of the molecule. The method is used to identify agents that (in) directly affect intracellular signalling, especially to screen for potential therapeutic agents or toxins, and identify new drug targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  78

Yeasts contg, mutated HOG gene or multiple copies of HOG gene - have reduced or increased glycerol production

Example 5; Fig 5; 28pp; English.

Cow glycerol fermentation products can be produced using mutant strains of yeast, e.g. Saccharomyces sp. or Torulaspora sp., that have a reduced glycerol prodn. relative to the unmutated parental strain. High compositive fly glycerol prodn. relative to the unmutated parental strain. Hog2 and HOG4. Yeast strains contg. mutant HOG genes have a reduction in glycerol biosynthesis and are useful in prodn. of novel beverages, baked goods or glycerol. HOG1 and HOG2 are defined as yeast genomic DNA segments capable of complementing the reduced growth in high osmolarity media (defined as the OsmS phenotype) and glycerol biosynthesis defect of HOG1 and hog2 mutants, respectively. Southern blot hybridisation of HOG1 to chromosome XII. The present sequence is that of the HOG1 gene product of 416 amino acids with a mol. wt. of 47 kDa.

Claim 1; Fig 1; 119pp; English.
The present claimed sequence represents the human stress-activated
protein kinase 4 (SAPK4) encoded by the SAPK4 cDNA which was isolated
from a human pituitary gland cDNA library. The invention claims that
from a human pituitary gland cDNA library. The invention claims that
SAPK4 protein can be useful in a screening assay for identifying agents
that inhibit its activity and/or agents that block its activation throug
stress activated kinase kinase 3 (SKK3). Therefore, the agents
identified in the assays may be potentially useful for treating
inflammatory diseases, e.g. rheumatoid arthritis, asthma and psoriasis.

                                                                                                                                                                                                                                                                                                                                                                       viral
                                                                                                                                                                                                                                                            The present sequence represents the novel human mitogen-activated protein (MAP) kinase homologue designated SMAP. The CDNA encoding was isolated from a human stomach cDNA library. The SMAP protein specifically involved with protective cell signalling processes at the products can be used in the study, diagnosis and treatment of conditions which affect the stomach such as gastritis, ulcers, vinand bacterial infections, or neoplasms associated with abnormal signally.

                                                                                                                                                                                                                                                                                                                14;
                                                                             This polypeptide sequence comprises SMAP, a human MAP kinase homologue that is involved in protective cell signalling processes. Its amino acid sequence was deduced from a claimed isolated polynucleotide (see T90352) obtained from a stomach cDNA library. Also claimed are: an expression vector containing the polynucleotide can be used in drug screening, drug design, research, antibody production, and in methods for the diagnosis and treatment of activated or inflammed cells and/or tissues associated with the expression of SMAP, especially for the diagnosis and treatment of conditions that affect the stomach such as gastritis, ulcers, viral and bacterial infections and neoplasms.

Claim 2; Page 34-35; 68pp; English.

A new family of proline-directed stress-activated protein kinases

C SAPK), designated p54 alpha-I, alpha-II, beta-I, beta-II and gamma (R89408-12, respectively), are products of a set of cDNA clones (see T10638-42) isolated from the brain cDNA library of a cycloheximide-treated rat. The SAPK p54 proteins are strongly activated by heat shock, tumour necrosis factor, interleukin-I-beta, sphingomyelinase, chemical protein synthesis inhibitors and ischaemia. They have potential utility in the modulation of the inflammatory response and the up-regulation of repair or protective cellular proteins following injury or chemical insult.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     188

and D-type cyclins are strongly implicated in the control of the G1 phase of the cell cycle and are strong candidates for control and/or preventing tumourigenesis and the onset of cancer. Nucleic encoding CDK4-BP or fragments of these may be used as probes/print to diagnose the presence or absence of genetic lesions in a gene encoding 1 of the 24 CDK4-BP, and hence to diagnose the risk for subject of developing a cell-proliferation associated disorder (examples of the control of th

"Isolation and characterization of cDNA clones encoding a functiona p34cdc2 homologue from Zea mays.";

PROC. NATL. ACAD. SCI. U.S.A. 88:3377-3381(1991).

-!- FUNCTION: PLAYS A KEY ROLE IN THE CONTROL OF THE EUKARYOTIC CELL CYCLE. COMPONENT OF THE KINASE COMPLEX THAT PHOSPHORYLATES THE THE REPETITIVE CARBOXYL-TERMINUS OF RNA POLYMERASE II.

-!- ENZYME REGULATION: PHOSPHORYLATION AT THR-14 OR TYR-15 INACTIVATES THE ENZYME, WHILE PHOSPHORYLATION AT THR-161 ACTIVATES IT (BY SIMILARITY).

-!- SIMILARITY).

-!- SIMILARITY: WITH THE CONSERVED CATALYTIC DOMAINS OF SER/THR-PROTEIN KINASES. BELONGS TO THE CDC2/CDKX SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PHOSPHORYLATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ZEA MAYS (MAIZE).

MARIDOR G., PARK W., KREK W., NIGG E.A.;

"Casein kinase II. cDNA sequences, developmental extissue distribution of mRNAs for alpha, alpha', and the chicken enzyme.";

J. BIOL. CHEM. 266:2362-2368(1991).

-!- FUNCTION: CASEIN KINASES ARE OPERATIONALLY DEFIPERERENTIAL UTILIZATION OF ACIDIC PROTEINS SUCAS SUBSTRATES.

-!- FUNCTION: THE ALPHA AND ALPHA' CHAINS CONTAIN;

BETA CHAINS.

-!- SUBUNIT: TETRAMER COMPOSED OF AN ALPHA CHAIN, RETAINS CHAINS.
                                                                                                                                                                                                                                                                                                                                                                           CONTAIN A CHAIN,
